

Due to the BFSK aeration and deaeration filter, the liquid tank can suck in clean and dry air and discharge it again in one step. The high flow rate and service / operator friendliness convincing, it is suitable for direct mounting to a tank.

Your product advantages: BFSK

- Air filtration and air drying in one step
- Water adsorbing granulate and exchange cartridge can be replaced independently of each other
- Optional check valves in the filter bowl (no air exchange during idle operation)
