

FRI series

Maximum pressure up to 20 bar - Flow rate up to 1500 l/min

FILTER SIZING

The correct filter sizing have to be based on the variable pressure drop depending by the application. For example, for the return filter the pressure drop have to be in the range 0.4 - 0.6 bar.

The pressure drop calculation is performed by adding together the value of the housing with the value of the filter element. The pressure drop in the housing is proportional to the fluid density (kg/dm^3); all the graphs in the catalogue are referred to mineral oil with density of $0.86 \text{ kg}/\text{dm}^3$.

The filter element pressure drop is proportional to its viscosity (mm^2/s), the corrective factor Y is related to an oil viscosity different than $30 \text{ mm}^2/\text{s}$.

Sizing data for single cartridge, head at top

Δp_c = Filter housing pressure drop [bar]

Δp_e = Filter element pressure drop [bar]

Y = Multiplication factor Y (see correspondent table), depending on the filter element size, on the filter element lenght and on the filter media

Q = flow rate (l/min)

V1 reference viscosity = $30 \text{ mm}^2/\text{s}$ (cSt)

V2 = operating viscosity in mm^2/s (cSt)

$\Delta p_e = Y : 1000 \times Q \times (V2/V1)$

$\Delta p_{\text{Tot.}} = \Delta p_c + \Delta p_e$

Calculation examples with HLP Mineral oil Variation in viscosity

Application data:

Top tank return filter

Filter with in-line connections

Pressure $P_{\text{max}} = 10 \text{ bar}$

Flow rate $Q = 120 \text{ l}/\text{min}$

Viscosity $V_2 = 46 \text{ mm}^2/\text{s}$ (cSt)

Oil viscosity = $0.86 \text{ kg}/\text{dm}^3$

Required filtration efficiency = $25 \mu\text{m}$ with absolute filtration

With bypass valve and $1 \frac{1}{4}$ " inlet connection

From the working pressure and the flow rate we understand it should be possible using the following top tank return filter series: MPT, MPH and FRI. Let's proceed with MPT series.

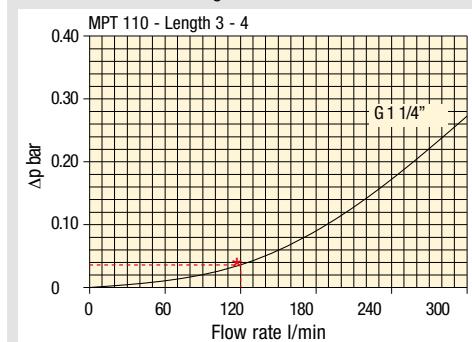

The size 20 doesn't achieve the required flow rate, therefore we have to consider the size 100. The final version of size 100 (101, 104, 110, 120 and 114) will be then defined in function of the mounting characteristics.

$\Delta p_c = 0.03 \text{ bar}$ (★ see graphic below, considering size 100 with the max available lenght to get the lowest pressure drop)

$\Delta p_e = (2.0 : 1000) \times 120 \times (46/30) = 0.37 \text{ bar}$

$\Delta p_{\text{Tot.}} = 0.03 + 0.37 = 0.4 \text{ bar}$

The selection is correct because the total pressure drop value is inside the admissible range for top tank return filters. It is of course possible trying to find a different solution, according to the mounting position or to other commercial need, repeating the previous steps while using a different series or lenght.

Filter housings Δp pressure drop.

The curves are plotted using mineral oil with density of $0.86 \text{ kg}/\text{dm}^3$ in compliance with ISO 3968. Δp varies proportionally with density.

Corrective factor

Corrective factor Y, to be used for the filter element pressure drop calculation.

The values depend to the filter size and lenght and to the filter media.

Reference viscosity $30 \text{ mm}^2/\text{s}$

Selection Software FILTER SIZING

Step ① Select "FILTERS"

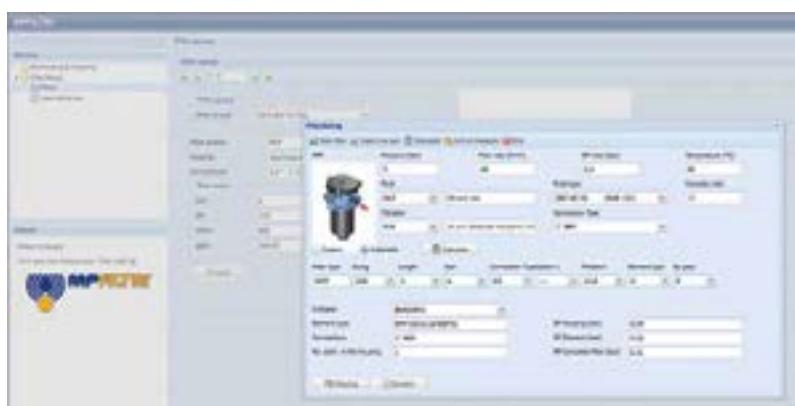

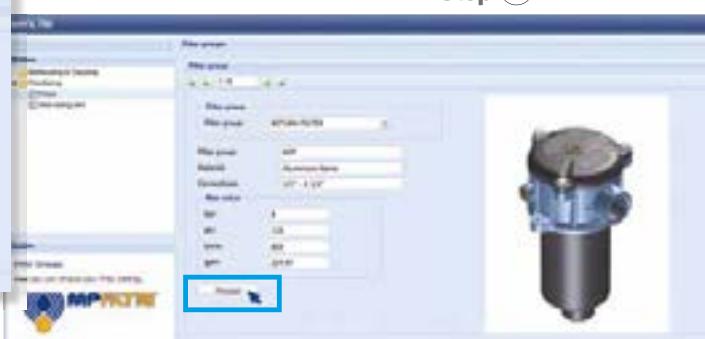

Step ② Choose filter group (Return Filter, Pressure Filter, etc.)

Step ③ Choose filter type (MPF, MPT, etc.) in function of the max working pressure and the max flow rate

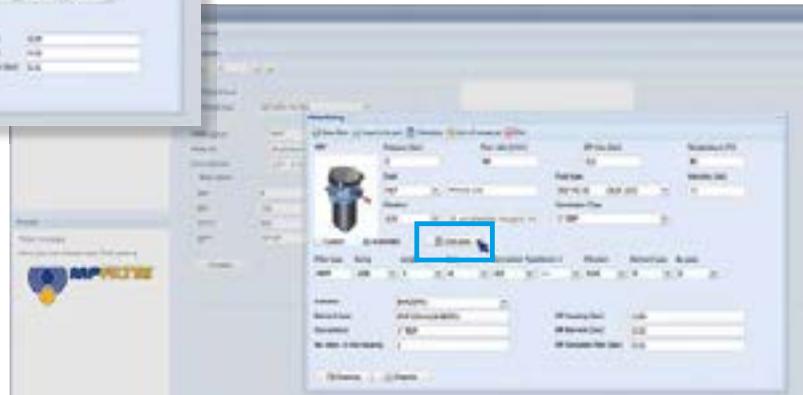

Step ④ Push "PROCEED"

Step ⑤

Insert all application data to calculate the filter size following the sequence:

- working pressure
- working flow rate
- working pressure drop
- working temperature
- fluid material and fluid type
- filtration media
- connection type

Step ⑥

Push "CALCULATE" to have result;
in case of any mistake, the system
will advice which parameter is out
of range to allow to modify/adjust
the selection

Step ⑦

Download PDF
Datasheet "Report.aspx" pushing the button "Drawing"

THE NEW FILTER CONCEPT

MFBX
MFX
series

NEW FILTER ELEMENT WITH EXCLUSIVE INTERFACE CONNECTION

- ◆ **Protects the machine from improper use of non-original products.**
- ◆ **Safety of constant quality protection & reliability**

With exclusive filter element you are sure that only filter elements MP Filtri can be used, ensuring the best cleaning level of the oil due to the use of originals filter elements.

Filter element featuring our UNIQUE end cap with polygonal design.

UNIQUE polygonal spigot fitting within the filter bowl.

The products identified as MPFX, MPTX, MFBX and MFX are protected by one or more of the following patent applications:

European Patent Pending: n° 16181725.9
Italian Patent Pending: n° 102015000040473
US Patent Pending: n° 15/224,337
Canadian Patent Pending: n° 2,937,258

FRI series

Maximum pressure up to 20 bar - Flow rate up to 1500 l/min

Technical data

Return filter Maximum pressure up to 20 bar - Flow rate up to 1500 l/min

Filter housing materials

- Filter body:
Aluminium: FRI 255
Anodized Aluminium: FRI 025-040-100-250-630
Phosphated Steel: FRI 850
- Cover:
Polyamide, GF reinforced (only for: FRI 255)
Anodized Aluminium (the other insert assemblies)
- Valve:
Polyamide, GF reinforced - Steel

Seals

- Standard NBR series A
- Optional FPM series V

Temperature

From -25 °C to +110 °C

Note

FRI filters are provided for vertical mounting

Pressure

Working pressure: 2 MPa (20 bar)

Bypass valve

Opening pressure 240 kPa (2.4 bar)

Δp element type

- Microfibre filter elements - series N: 10 bar
- Fluid flow through the filter element from OUT to IN.
